Farmer-led irrigation development (FLI) has gained increased attention by government institutions, development and implementation partners as one of the potential solutions to build climate resilience for smallholder farmers and transform food systems to support healthy diets for all. The knock-on effects of health-related disasters such as the Covid-19 pandemic on market disruptions impacting food and nutrition security, enforces the urgency to increase multiple purpose water access and increase local community resilience.

The International Water Management Institute (IWMI) together with the Water Global Practice of the World Bank, The Daugherty Water for Food Global Institute and the Global Water Partnership (GWP) are hosting a virtual mini-series to discuss key issues and identify a way forward for operationalizing sustainable and inclusive scaling of farmer-led irrigation development. The two-part webinar series is geared towards practitioners, policy makers, private sector and researchers interested in further advancing FLI globally and overcoming the often observed systemic barriers in reaching scale.

In part I of the webinar our experts shared their perspectives on the systemic barriers to scaling farmer led irrigation development. We zoomed in on strengthening supply chains and services and how innovative finance modalities could support social inclusivity. In part II of webinar, we raise the question on how accelerating FLI development can be sustainable and inclusive. How do we ensure water security whilst supporting agricultural economic development? What are the incentives across actors within food systems to support sustainable use of water resources? How do we ensure that water access remains equitable to all water users? What is the role of institutions and regulations to safeguard and stimulate water stewardship?

Accelerating inclusive Farmer-led Irrigation development: a sustainable approach to reaching scale

Session II
July 9, 2020
13:00 - 14:30 UTC

Washington: 9:00 - 10:30
Rome: 15:00 - 16:30
Delhi: 18:30 - 20:00
Sydney: 23:00 - 24:30

Peter McCorrnick
Daugherty Water for Food Global Institute

Regassa Namara
The Water Global Practice of the World Bank

Petra Schmitter
International Water Management Institute

Shilp Verma
International Water Management Institute

Barbara Van Koppen
Rural Water Supply Network and International Water Management Institute

Peter Repinski
Global Water Partnership

Armand Houanye
Global Water Partnership

Dave D’Haeze
Hanns R. Neumann Foundation

Claudia Ringler
International Food Policy Research Institute

Sarah Keener
The Water Global Practice of the World Bank

Joy Busolo
The 2030WRG Africa of the World Bank
